347-07-2-1

347 Series Station Protectors consist of one or two protector modules in a top-hinged enclosure with integral ground stud. They are engineered to provide the superior performance required in providing protection for today's technology.

KEY PRODUCT BENEFITS

- ▶ Enclosure is molded of durable, weather-resistant thermoplastic that resists cracking, crazing and discoloration
- ▶ A hinged cover is designed to fit securely to the base to provide maximum protection against environmental conditions and the intrusion of any foreign matter
- ▶ A captive nylon nut may be provided to give a degree of tamper proofing, and for easy installation and removal. The enclosure can be ordered without the captive insulated nut
- ▶ For added security, the cover can be sealed in the field with a tie wrap or similar device
- ▶ A flexible grommet in the base is provided to seal the wiring exit area, allowing room for drop, ground, and station wiring
- ▶ A threaded stud provides a common ground point for grounding and bonding the shield of buried drop, as well as securing one or two Tii protector modules and cover
- ▶ The 347 is available with a variety of protector modules with standard binding post termination or sealed IDC termination. This series is also available with sealed IDC cross-connect modules (non-protected).
- ▶ Tii station protectors may be ordered with one or two protector modules installed
- ▶ A one-pair station protector can be upgraded to a two-pair station protector simply by adding a second module. This saves both maintenance time and the need to add a second single-pair station protector.

INDUSTRY STANDARDS

- ▶ Listed to UL 497
