Terminal Block with Wire Wrap Termination

Designed For
Easy Installation and
Maintenance

Easy Connection of
Equipment, Expansion
and Upgrade

Hinged Connection Field
Facilitates Easy Termination
of Equipment Pairs

Ample Designation
Areas On Both Front and
Back of The Cover

Designation Label Included

88 Equipment Terminal Blocks are used to terminate exchange equipment pairs on the horizontal side of a conventional main distribution frame (MDF) and provide a cross-connect field for jumpering to the Outside Plant (OSP) vertical side of the frame.

KEY PRODUCT BENEFITS

▶ Eight-inch block accommodates most conventional horizontal frame mounting configurations

▶ Mounting bracket included for easy installation

▶ Up to 256 pair wire-wrap output termination provides maximum density

▶ Bifurcated wire wrap pins for the cross-connect field are available

▶ Hinged connection field facilitates easy termination of equipment pairs

▶ Special housing allows neat and organized administration of incoming cross-connect pairs

▶ Flat face allows use in tight quarters such as cabinets and vaults

▶ Ample designation areas on both front and back of the cover

▶ Designation label included
