Two-Line Module with Two-Way Switching Capability

For Use When
Porting Existing
Telephone Numbers

Automatic Switching
from One Service
Provider to Another

Ringing Voltage on the
Line Initiates Transition

Snaps Easily Into Tii's
SVN-12 Adapter Panel

Utilizes Tii's Gel-Sealed
IDC Rocker Design

The 89 Module is a two-way switchable voice module which utilizes two microcontrollers to switch service between alternate telephone service providers. Once the service has been transferred to the second service provider, it stays in that mode until ringing voltage from the first provider appears on the line.

KEY PRODUCT BENEFITS

- ▶ The customer is not without telephone service during number portability process
- ▶ Eliminates additional truck roll costs by automatically switching between the service providers
- ▶ Compact, modular design for optimal wiring
- ▶ Accepts 26 through 22 gauge solid conductor wires
- ▶ Built in switch safety function eliminates service switching when telephone line is in use
