Indoor Digital
Voice Connector with
Dual RJ-14 Inputs

Four Telephone Line
Outputs via Tool-less
IDC Connections

IDC Rockers Terminate
26-22 AWG Wire

Easy Access Test Ports

Incorporates Switching
RJ-31X Security Jack for
Alarm Override on Line 1

The Tii DVC-4, four line digital voice connector, distributes EMTA connections to customer's telephone lines through sealed IDC rocker assemblies.

KEY PRODUCT BENEFITS

- ▶ Tool-less IDC/rocker for telephone wire connections.
- ▶ Readily accessible test ports for line verification.
- ▶ RJ-31X security jack diverts line 1 through the local security panel. (Product is also available without the RJ-31X, Model# DVC-4-X)
- ▶ Mounts to any dry/flat surface with integral screw down tabs.
- ▶ The RJ-31X provides a series connection to the tip and ring conductors of line one on the DVC-4. The jack is wired ahead of all station equipment electrically and is typically used with registered alarm-reporting devices. When an alarm condition occurs, the RJ-31X functions to cut off all station equipment wired into the home or business.
