## 761SM-12

### Installation Notice

The Federal Communications Commission requires that the telephone company provide each customer with a demarcation point to separate the telephone company and customer owned premises wiring. We have made your wiring connections to the network.

#### To Test Phone Network:

Plug a working phone directly into "Customer Test Port". If your phone is wall mounted carefully remove the phone from the wall plate to gain access to the "Customer Test Port".

After plugging a working phone into the customer test port, WAIT ONE MINUTE. Lift receiver. If dial tone is heard, the problem is in your premises' equipment or wiring. If no dial tone is heard, contact your telephone company.
